

Keen Pumps is a family-owned American manufacturer of heavy-duty wastewater equipment specializing in grinder, chopper, and solids-handling pumps, packaged lift stations, control panels, and retrofit systems for municipal, commercial, and industrial applications. Known for durable construction, custom engineered solutions, and strong performance in demanding wastewater environments.

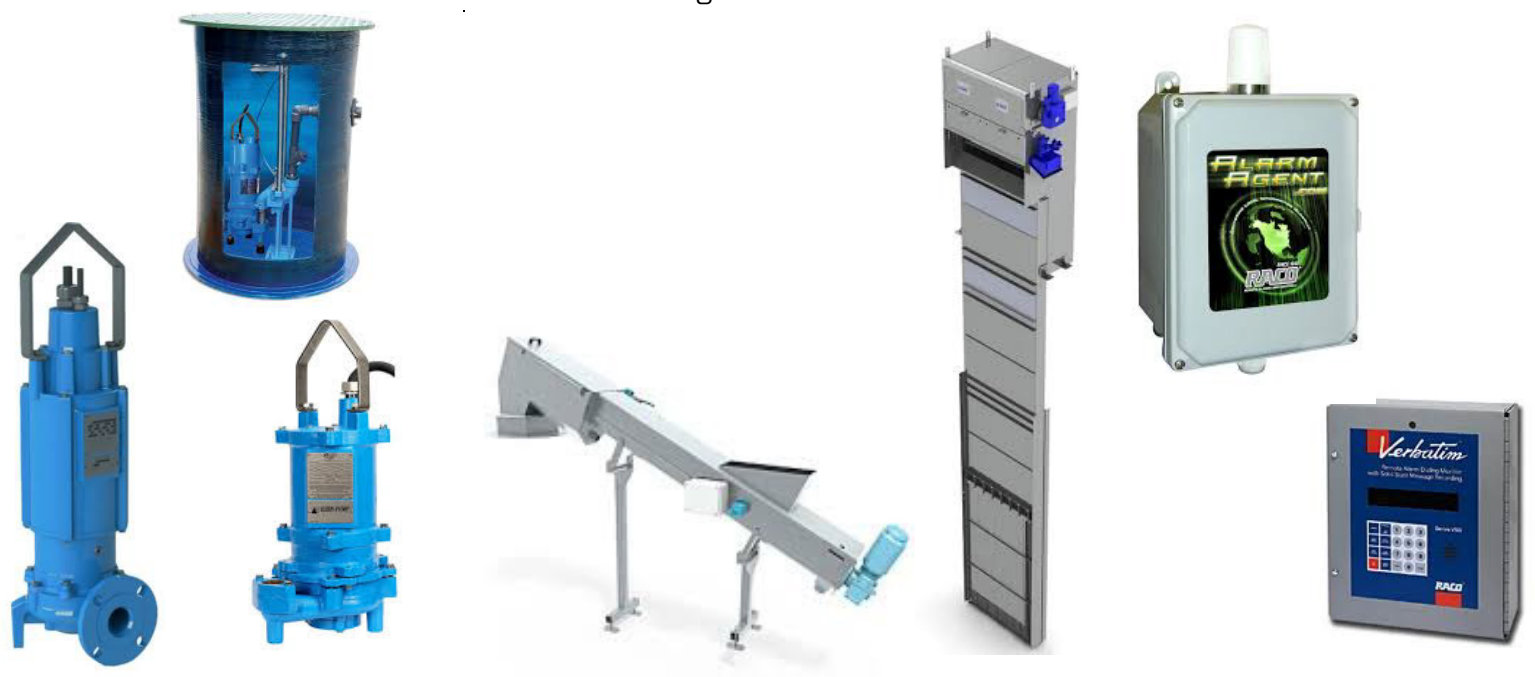

Manufacturer of remote monitoring and SCADA solutions including AlarmAgent™ telemetry systems, lift station monitoring, tank level controls, and alarm notification systems for municipal and industrial water/wastewater applications.

Manufacturer of wastewater screening and solids handling equipment including mechanical bar screens, grit classifiers, washer compactors, and sludge treatment solutions designed to protect pumps, reduce maintenance, and improve wastewater system reliability.

A global leader in filtration technology, MANN+HUMMEL provides advanced water and wastewater treatment solutions, including membrane filtration systems for drinking water, wastewater reuse, and industrial applications. Their innovative technologies help utilities improve water quality, increase efficiency, and meet stringent environmental standards.
